WOCA WORKTOP GEL - APPLICATION INSTRUCTIONS

WOCA Worktop Gel is used to re-oil previously oiled surfaces, such as countertops, tables and furniture. This effective gel is quick-drying and enhances the natural grain structures of the wood and color and provides a resistant and strong wear surface. Worktop Gel is available in Natural and White.

Work instructions:

1. Clean the surface thoroughly with WOCA Wood Cleaner mixed with water in solution 1:40 (3 oz. per gallon of lukewarm water). After cleaning, let the wood dry completely.
2. In case of grain raising, lightly sand surface with 220 grit sand paper and remove sanding dust.
3. Apply a suitable amount of gel in an even thin coat with a polishing pad (red or white).
4. Polish the gel until the wood appears saturated and the surface looks uniform. We recommend working in sections as the gel dries quickly.
5. Wipe off the polished area carefully with a dry lint-free cloth before continuing to next area. The surface should not appear wet and no excess gel must be left on the surface after polishing.
6. If the wood does not seem fully saturated after 4-6 hours, repeat the polishing with a smaller amount of gel.
7. Leave the worktop to dry for 4-6 hours, when it may be cautiously taken into use. If possible, do not expose the worktop to water for 2-3 days. After 3 days, spray and wipe with WOCA Soap Spray.

Maintenance:

1. Use WOCA Soap Spray daily or weekly to keep surface clean. Simply spray and wipe.
2. Re-oiling with Worktop Gel or Worktop Oil (see separate instructions) is done as needed. Clean the surface with Wood Cleaner and let dry completely.
3. Follow steps 3 to 7.
4. Stains and other minor damages are easily repairable by cleaning the area locally with WOCA Wood Cleaner, letting it dry and polishing with a small amount of Worktop Gel.

Warning! Rags, pads or waste soaked with WOCA oil may self-ignite if improperly discarded. Immediately after use, place all rags and waste in a sealed, water filled bucket for proper disposal.
